Product Disclaimer	• Services are contract dependent; if a product excludes coverage for a service, it is not covered, and medical policy criteria do not apply.
	• If a commercial product (including an Essential Plan or Child Health Plus product), medical policy criteria apply to the benefit.
	• If a Medicaid product covers a specific service, and there are no New York State Medicaid guidelines (eMedNY) criteria, medical policy criteria apply to the benefit.
	• If a Medicare product (including Medicare HMO-Dual Special Needs Program (DSNP) product) covers a specific service, and there is no national or local Medicare coverage decision for the service, medical policy criteria apply to the benefit.
	• If a Medicare HMO-Dual Special Needs Program (DSNP) product DOES NOT cover a specific service, please refer to the Medicaid Product coverage line.

POLICY STATEMENT

- I. Based upon our criteria and assessment of the peer-reviewed literature, wheelchairs are considered **medically appropriate and eligible for coverage** when used by the patient for mobility in the performance of activities of daily living in his/her residence. (See Policy Guideline VII, Wheelchair Features and Coverage Criteria, for additional criteria for non-standard wheelchairs and mobility devices.)
- II. Based upon our criteria and assessment of the peer-reviewed literature, power operated vehicles (POV's) are considered **medically appropriate and eligible for coverage** when a patient meets coverage criteria for a wheelchair, is unable to self-propel a manual wheelchair, and is cognitively and physically able to operate a POV.
- III. Based upon our criteria and assessment of the peer-reviewed literature, wheelchairs are considered **not medically necessary** in **ANY** of the following circumstances:
 - A. When used primarily for comfort, assistance, or convenience;
 - B. When used primarily for transportation outside the home, except for dependent children who require a wheelchair to attend school;
 - C. When used for sports or recreational purposes.
- IV. Based upon our criteria and assessment of the peer-reviewed literature, wheelchairs with stair climbing ability (e.g., iBOT) are considered **not medically necessary**.
- V. If an upgrade in equipment is requested, the patient's functional status (diagnosis, prognosis and severity of condition) must be reviewed, as part of the justification for medical necessity as described below. (See Policy Guideline VII, Wheelchair Features and Coverage Criteria, for additional criteria for non-standard wheelchairs and mobility devices).
- VI. Replacement of wheelchairs may be covered when: the cost of the repair is in excess of the replacement cost; other

Medical Policy: Wheelchairs and Power Operated Vehicles (POVs) Policy Number: 1.01.16 Page: 2 of 16

extenuating medical circumstances occur that require special consideration; or the current wheelchair no longer can meet the patient's needs.

Refer to Corporate Medical Policy #1.01.00 Durable Medical Equipment- Standard and Non-Standard

Refer to Corporate Medical Policy #1.01.46 Standing Devices

POLICY GUIDELINES

I. Supporting Documentation Required

Coverage of wheelchairs and accessories/special features requires **documentation of medical necessity** by the patient's practitioner. Documentation must be submitted for review and must include the patient's diagnosis, a narrative description with functional criteria for the wheelchair and any requested *non-standard* features. At a minimum, such documentation must include:

- A. Diagnosis, prognosis and severity of condition;
- B. Seating and mobility evaluation by a trained professional familiar with seating, positioning and wheeled mobility options taking into account the current functional abilities and disabilities of the patient as well as potential long term needs. The Health Plan reserves the right to require an assessment for a requested mobility device to be performed on the patient by an independent rehabilitation specialist, therapist, or equipment specialist;
- C. Assessment of the home environment for wheelchair accessibility and the ability to accommodate any special equipment, positioning devices or motorized component (e.g., door frame size) if requested;
- D. If a motorized wheelchair is requested an explanation as to why a standard wheelchair is inadequate for the particular activity of daily living; and
- E. Relevant medical records.
- II. Coverage will be provided for one manual wheelchair, one motorized wheelchair, or one scooter. More than one mobility device is considered a matter of convenience for the member and his/her family. No coverage for a back-up wheelchair will be provided except that a one-month rental will be covered if the owned wheelchair is being repaired.
- III. A wheelchair must be appropriate for the patient's disability, size, weight, activity, and for the home environment.
- IV. For persons residing at a residential facility and receiving custodial care services (custodial care status), wheelchairs are **eligible for coverage** when criteria are met.
- V. For persons temporarily residing in a residential facility and receiving skilled services (skilled status), coverage of wheelchairs is considered global to the skilled nursing facility (SNF) reimbursement.
- VI. Replacement of wheelchairs may be covered when: the cost of the repair is in excess of the replacement cost; other extenuating medical circumstances occur that require special consideration; or the current wheelchair no longer can meet the patient's needs.
- VII. Wheelchair Features and Coverage Criteria

The following is a list of characteristics and additional coverage criteria for various models of wheelchairs.

Model/Description	Coverage Criteria	Non-Coverage Criteria
Standard -Manual	1. Patient has impaired mobility in	1. Used solely for social,
Wt: greater than 36 lbs	performance of mobility-related	recreational or employment
Seat width: 16-18"	activities of daily living	activities.
Seat depth: 16"	(MRADL's) in the home which	
Seat height: equal or greater than	would be alleviated by the mobility	
19" or equal or less than 21"	device; AND	
Back height: 16-17"	2. Patient is able to self- propel a	
Arm style: fixed or detachable	wheelchair;	
	AND	
	3. Patient's mobility limitation cannot	
	be resolved by use of an

	than six weeks.	NMN due to features that are not
		necessary for in home use.

Medical Policy: Wheelchairs and Power Operated Vehicles (POVs) Policy Number: 1.01.16 Page: 5 of 16

Model/Description	Coverage Criteria	Non-Coverage Criteria
Motorized Wheelchairs – Pediatric Used in severe impairment of functional mobility. Without the use of the wheelchair, the patient would be severely limited or unable to perform routine ADL's. Inability to safely propel a manual wheelchair due to severely limited upper extremity function. Inability of the caregiver to safely propel a manual wheelchair.	 Patient meets criteria for a standard manual wheelchair; AND Is able to safely operate a power operated wheelchair as determined by an appropriate developmental evaluation; AND Is expected to continue need for the motorized wheelchair for greater than dix weeks. 	 Patient cannot safely operate the power operated wheelchair due to lack of developed cognitive and motor skills. Caregiver is available and can propel the patient. Patient can self-propel from room to room in the home. When used primarily for transportation to shopping, social or recreational activities, or for other activities outside the domicile/home. Use as convenience item.
Power Operated Vehicle Electrically operated three or four wheeled chair or scooter designed to transport a patient that is unable to ambulate but has adequate trunk stability to be able to ride safely in the vehicle.	 Patient meets criteria for a standard manual wheelchair; AND Is unable to maneuver a manual wheelchair for a distance greater than 25 feet; AND Is be able to safely transfer in and out of POV and have adequate trunk stability to ride safely in the vehicle; AND Has a condition that is non- progressive; POV may be provided in lieu of motorized wheelchair if the POV meets the needs of the patient and is a more cost-efficient alternative; AND Disability is expected to continue for greater than six months. 	 Use as convenience item; or Patient has inadequate trunk stability to ride safely; or Patient is disoriented or cannot be left unattended; or Patient is unable to operate controls; or Use as back-up item; or Purchased without a prescription. K0806-K0808 are considered NMN due to features that are not necessary for in home use.
Rollabout/Transport Chairs May also be called a mobile geriatric chair (geri-chair). Front and back wheels the same size.	 Patient meets criteria for a standard manual wheelchair except may not be able to self-propel manual wheelchair; AND Is used as primary means of transport in the home. 	1. Used solely for social, recreational or employment activities.
Pediatric Stroller	 Child is non-ambulatory; AND Stroller is used to transport child to and from school; AND Child requires more support than is available in a standard pediatric wheelchair; OR Child is too small to safely use a standard pediatric wheelchair; OR Commercially available stroller is inadequate to meet the child's needs. 	Not applicable.

VIII. The following is a list of special features, accessories, and customizations with coverage criteria. This list is not allinclusive.

Feature/ Description	Coverage Criteria	Non-Coverage Criteria
Adjustable arm-height option	 Patient spends at least two hours per day in a wheelchair; AND Patient needs arm height that is different from standard non- adjustable arms. 	Not applicable.
Anti-roll back or anti-tip device Prevents tipping or wheelchair ability to independently raise front wheels when accessing inclines.	Patient propels either a manual wheelchair or power operated wheelchair up ramps/inclines.	Not applicable.
Arm support/ trough Stabilizes the arm.	Patient has quadriplegia/ tetraplegia, or hemiplegia, or uncontrolled arm movements.	Not applicable.
Attendant Drive Control Allows the caregiver to drive the wheelchair instead of the patient.	Not applicable.	Convenience item.
Battery Charger Single mode included with power wheelchair base.	Not applicable.	Dual mode battery charger is a convenience item.
Caster Tires Pneumatic or semi-pneumatic - provides shock absorption from outdoor and rough surfaces. Solid core - used on smooth surfaces and indoors (flat-free).	Not applicable.	Castor tires with lights are considered a convenience item.
Chin Control/Support	Patient has weak neck muscles.	Not applicable.
Clothing/ Side Guards Protects clothing from dirt, mud or water thrown up by the wheels.	Not applicable.	Convenience item (used for outside the home).
Custom Manual/Power Wheelchair Base Frame has been customized to a specific patient.	Patient requires a wheelchair base that is not an available option in an already manufactured base.	Not applicable.
Elevating Leg Rests – Manual or Power Allows the leg to be raised and lowered independently of the recline and/or tilt of the seating system. Power leg elevation for use with a Power Wheelchair.	 Musculoskeletal condition or presence of cast or brace that prevents 9- degree flexion of the knee; OR Significant edema of the lower extremities; OR Has a reclining back on a wheelchair. 	Not applicable.

Medical Policy: Wheelchairs and Power Operated Vehicles (POVs) Policy Number: 1.01.16 Page: 7 of 16

Feature/ Description	Coverage Criteria	Non-Coverage Criteria
Articulating (telescoping) power elevating leg rests lengthen while also extending the knee.		
Controller- Integral or Modular - Power Controller function allows the patient to operate the power wheelchair. It is used in conjunction with a proportional interface in which the direction and amount of movement by the patient controls the direction and speed of the wheelchair. One example of a proportional interface is a standard joystick. A non-proportional interface consists of a number of switches. An example of a non-proportional interface is a sip and puff control. Integral controller has single housing unit with joystick; may be standard. (e.g., Remote Plus electronic system). Modular controller has separate components for different functions. Able to mix and match components to accommodate function enhancers. (e.g., Q-logic Control System).	Inability to operate a manual or power wheelchair. *Integral controller for patients who will have little or no change in functional status and need no special control features in their wheelchair. *Modular controller for patients who need enhanced functions such as sip and puff, head array, power seating systems.	Additional modules for the Q-logic Control System (e.g., environmental controls) is a convenience item.
Fully Reclining/ Folding Back- Manual	 Patient is quadriplegic/tetraplegic; OR Has trunk or lower extremity cast/braces that require specially positioning; OR Has fixed hip angle; OR Has excess extensor tone of the trunk muscle; OR Has prior history of skin breakdown; OR Utilizes intermittent catheterization for bladder management and is unable to independently transfer from the wheelchair to bed; OR Is unable to carry out a functional weight shift due to spinal cord disease, neurological disease, childhood cerebral degeneration, 	 Convenience item if purpose is for transport only. Used for prophylaxis of sacral decubiti.

Feature/ Description	Coverage Criteria	Non-Coverage Criteria
	Alzheimer's disease, Parkinson's disease.	
Head rest (Not included in power tilt and recline or power recline seating system.)	 Patient meets criteria for manual tilt- in-space; OR Manual semi- or fully reclining back; OR Power tilt and or recline seating system. 	Considered NMN on a Power Wheelchair with a Captain's seat.
Miscellaneous accessories: Amputee adapter, heel loops, IV rod, narrowing device, oxygen carrier, ventilator tray, speech generative device table, suspension fork, wide stance arm bracket, leg straps, footrests, back straps, additional pads for hips, arms, or legs.	May be considered medically necessary based on individual consideration when adequate documentation is provided.	Not applicable.
Miscellaneous Accessories (Non Covered): Trays, back packs, crutch or cane holder, shock absorbers, impact guards, lighting systems any option or accessory that is primarily for the purpose of allowing the member to perform leisure, recreation or sports activities, electrical or mechanical features that enhance basic equipment and that usually serve a convenience function.	Not applicable.	Convenience items.
Upholstery - Reinforced Back or Seat Not standard with power wheelchair base.	Patient weighs more than 200 lbs.	 Should be included with heavy duty or extra heavy-duty wheelchair base. If used in conjunction with other manual wheelchair bases.
Push/ Hand Rims/ Handles Addition to wheel to aid in self propelling a manual wheelchair rather than pushing on tire rim. Poorly designed hand rims can cause pain in hands and wrists associated with Carpal Tunnel Syndrome (e.g., Natural Fit hand rims provide ergonomic grip and greater control when braking).	Pain in hands from pushing standard hand rims or tires.	Not designed for patients with poor hand function.

Medical Policy: Wheelchairs and Power Operated Vehicles (POVs) Policy Number: 1.01.16 Page: 9 of 16

Feature/ Description	Coverage Criteria	Non-Coverage Criteria
Power add-ons/ Push Activated System Provides an additional power boost to wheels upon the users input force on the push rims. This added boost often provides the necessary force to get the users up hills or to allow them to continue on in a manual chair when shoulder pain, strength or fatigue might otherwise force them to go to a powered wheelchair.	Based on individual consideration when adequate documentation provided.	Not applicable.
Safety Belt/ Shoulder Harness, Structured Harness Allows for proper positioning.	 Weak upper body muscles; OR Patient has upper body instability or muscle spasticity. 	Not applicable.
Seat Cushion or Back Cushion General Use: Prefabricated cushion made of foam, flexible cellular material, air fluid or solid gel. Skin Protection: Composed of foam, flexible cellular material, air, fluid or solid gel or a multi- compartment air cushion or composed of two or more types of foam with different stiffness. Positioning: Composed of foam, flexible cellular material, air, fluid and supporting structural features.	 Patient spends at least two hrs per day in a wheelchair; AND History of or current pressure ulcer on area of contact with seating surface; OR Absent or impaired sensation in area of contact with seating surface; OR Unable to carry out a functional weight shift due to spinal cord disease, neurological disease, childhood cerebral degeneration, Alzheimer's disease, Parkinson's disease; OR Significant postural asymmetries due to spinal cord injury/disease, demyelinating disease, neurological diseases, Alzheimer's disease, Parkinson's disease, hemiplegia due to stroke, traumatic brain injury. 	 Patient does not have a wheelchair. Use with transport chair (comfort item). Patient cannot reposition self at least every two hours (seat cushion will not prevent development of pressure ulcers).
Seat or Back Cushion - Custom Fabricated Has removable waterproof cover or surface.	 Meets criteria for skin protection seat or positioning seat cushion; AND Explanation from health care profession why this type of cushion is necessary. 	Not applicable.
Seat Cushion - Powered Battery operated, prefabricated cushion powered by an air pump to cause the cushion to inflate and deflate.	Not applicable.	Considered Investigational as its effectiveness has not been established.

Feature/ Description	Coverage Criteria	Non-Coverage Criteria
Seat and Back Cushions - Replacement	 Would be considered when out of warranty; OR Irreparably damaged (other than wear and tear); OR Item is lost or stolen; OR A change in member's medical condition that requires a different type of seating or positioning item. 	Not applicable.
 Seating System Ensures optimal posture and positioning. Consists of: 1) Seat, 2) Back, and 3) Supports. Four different types: Sling – minimal support; Planar – flat surface without contours – firm support. For patients with no pelvis/spinal deformities. Contoured – postural support and pressure relief (e.g., Synergy, TruComfort, Jay Fit for pediatric patients). Custom Contoured- conforms to shape of pelvis and spine. Provides maximum support and pressure distribution. 	Based on individual consideration when adequate documentation provided.	Not applicable.
Seat Elevation- Power Raises and lowers the patient in their seated position by the use of an electro-mechanical lift system, without changing the seated angles or the seat's angle relative to the ground, in order to provide varying amounts of added vertical access. A seat elevator may elevate vertically from a standard seat height, or may lower the user closer to the floor.	Not applicable.	Convenience item.
Stander Attachment- Power Patient requires assistance to assume standing position and has some residual muscular strength in legs, such that standing will improve lower body strength.	Not applicable.	No evidence that power stander improves lower body strength for patients who are completely paralyzed in the legs and hips.

<u>Feature/ Description</u>	Coverage Criteria	Non-Coverage Criteria
Tilt and/or Recline Seating Systems - Manual/Power Designed to reduce the weight placed on a person's coccyx (tailbone) and buttocks. Disperses weight evenly over the buttocks and legs. Tilting backwards shifts weight off the buttocks and legs while maintaining a normal sitting posture.	 Patient is quadriplegic/tetraplegic; OR Has trunk or lower extremity cast/braces that require specially positioning; OR Has fixed hip angle; OR Has excess extensor tone of the trunk muscle; OR Has prior history of skin breakdown; OR Significant edema of lower extremities; OR Utilizes intermittent catheterization for bladder management and is unable to independently transfer from the wheelchair to bed; OR Is unable to carry out a functional weight shift due to spinal cord disease, neurological disease, childhood cerebral degeneration, Alzheimer's disease, Parkinson's disease. 	Used for prophylaxis of sacral decubiti.
Swing away, Retractable or Removable Legrests/ Hardware	If needed for patient to perform a slide transfer to a chair or bed.	 If primary use is to allow patient to move closer to desks or other surfaces. Should be considered part of the wheelchair base.
Transport Tie Down Keeps chair stabilized when traveling. Usually an addition to the transport vehicle rather than to the wheelchair.	Covered for pediatric patients if wheelchair is used to transport to and from school.	1. Convenience item for adults.
Wheelchair Tires Specially designed tires which may be more lightweight, narrower, have custom rims or be "flat-free". May be used for sports or recreational activities. Pneumatic: air filled: lightweight provides cushioned ride. Semi-pneumatic: possible problematic maintenance. Flat-free: standard tires filled with polyfoam.	Not applicable.	 Used for sports or recreational purpose; or Snow tires (convenience item).

CODES

• Eligibility for reimbursement is based upon the benefits set forth in the member's subscriber contract.
